DATA ANALYST | BUSINESS INTELLIGENCE | SQL | PYTHON | ETL | DASHBOARDING

SUMMARY

Data Analyst with analytics experience across ETL, BI reporting, predictive analytics, and dashboards. Skilled in Python, SQL, Snowflake, Tableau, and Power BI, building data pipelines and KPI reports for cross-functional stakeholders.

SKILLS

- **Programming:** Python, SQL, R
- **Data Analytics:** Pandas, NumPy, EDA, Statistical Analysis, Predictive Analytics, A/B Testing
- **Business Intelligence:** Tableau, Power BI, Excel, KPI Reporting, Dashboard Development
- **Data Engineering:** ETL Pipelines, Data Cleaning, Data Transformation, Data Integration, Data Validation, Spark
- **Cloud & Data Platforms:** Snowflake, Databricks, AWS (S3), Microsoft Azure, GCP, SQLite
- **Machine Learning:** Scikit-learn, XGBoost, CatBoost, Random Forest, Regression, Classification, Forecasting, Model Evaluation, Cross-Validation, Hyperparameter Tuning, Feature Engineering, ROC-AUC
- **AI & Automation:** LLM APIs, Prompt Engineering, AI-Assisted Automation
- **Tools:** Git, GitHub, Docker, Jupyter Notebook

EXPERIENCE

Data Science Capstone Consultant | Tacoma Power | Jan 2026 - Jun 2026

- Engineered Python, SQL, and Snowflake ETL pipelines to consolidate **150K+ inspection records**, reducing processing time by **~30%** and improving data reliability for asset-maintenance analysis.
- Modeled equipment failure patterns to prioritize preventive maintenance actions, supporting risk-based planning tied to an estimated **15% reduction** in unplanned outages.
- Automated Tableau dashboards and KPI reporting workflows, reducing manual reporting effort by **~40%** and improving operational visibility for engineering and business stakeholders.

Data Analyst Intern | Manuh Global Technologies Pvt Ltd | Jan 2024 - Aug 2024

- Standardized and transformed **60K+ records** using Python and SQL, improving data quality by **~25%** and reducing recurring reporting errors.
- Quantified trends across **7+ datasets** through ad-hoc analysis and forecasting, improving planning accuracy and reducing report turnaround time by **~20%**.
- Delivered Power BI and Tableau dashboards that increased stakeholder adoption by **~30%** and streamlined recurring KPI reporting.

Data Analyst Intern | Edumoon | Andhra University | Nov 2022 - Nov 2023

- Analyzed engagement data across **7 campuses** to identify usage patterns, helping increase active platform adoption by **10-12%**.
- Built a centralized data pipeline that reduced manual processing and data retrieval time by **35-40%**.
- Translated Python-based analysis into product recommendations, informing feature improvements tied to student retention and platform adoption.

Graduate Student Representative | Graduate Student Government Association | Seattle University | Nov 2025 - Jun 2026

- Represented **1,800+ graduate students**, collaborating with faculty committees to communicate student feedback, support policy discussions, and improve campus resource visibility.

PROJECTS

Parking Flow Intelligence | Python, Scikit-learn, Random Forest, Time-Series Forecasting

- Engineered a parking occupancy forecasting pipeline using **35K+ records** across **30 locations**, applying ETL, lag features, rolling averages, and validation checks to detect congestion risk patterns.
- Improved model performance from **0.874 to 0.974 R-squared** with **1.71% MAE**, producing KPI dashboards and operational reports for parking-demand planning.

Food Delivery Cancellation Prediction | Python, XGBoost, CatBoost, Random Forest, A/B Testing

- Evaluated cancellation penalties across **\$0, \$10, and \$20** groups using feature engineering, A/B testing, statistical analysis, profit optimization, and revenue-impact analysis.
- Identified the **\$20 penalty** as the optimal strategy, reducing cancellation rates from **18.79% to 10.03%** and building ML models with **~0.78 precision** for risk-based intervention planning.

Airline Delay Control Tower ETL | Python, SQL, SQLite, ETL Pipeline

- Developed an end-to-end ETL pipeline processing **500K airline records** with validation, transformation, dimensional modeling, SQL-ready warehousing, and automated QA checks.
- Built route-risk analytics across **2,777 flight routes** by combining delay frequency, cancellation trends, and traffic volume to produce operational insights and KPI reports.

Waze User Churn Retention Analysis | Python, Pandas, Scikit-learn, Random Forest, Logistic Regression

- Segmented **14K+ users** through EDA, feature engineering, and churn modeling, identifying **34.72% churn** among low-activity users versus **5.10%** among high-activity users.
- Converted model scores into retention segments, flagging **343** likely churned users and estimating **\$3,240** in pilot retention value through threshold-based targeting.

CERTIFICATIONS

- Microsoft Azure AI Fundamentals
- Generative AI Fundamentals - Databricks
- Artificial Intelligence A-Z 2025: Gen AI & Agentic AI, Machine Learning A-Z: AI, Python & R - Udemy

EDUCATION

Master of Science in Data Science | Seattle University, Seattle, WA | Sept 2024 - Jun 2026

Relevant Coursework: Statistical Modeling, Data Visualization, Database Management Systems, Machine Learning, Big Data

Bachelor of Engineering in Computer Science | Andhra University, Visakhapatnam, India | Jul 2020 - May 2024

Relevant Coursework: Data Structures & Algorithms, Probability & Statistics, Artificial Intelligence, Software Engineering
